

The Edison Foundation

INSTITUTE for
ELECTRIC INNOVATION

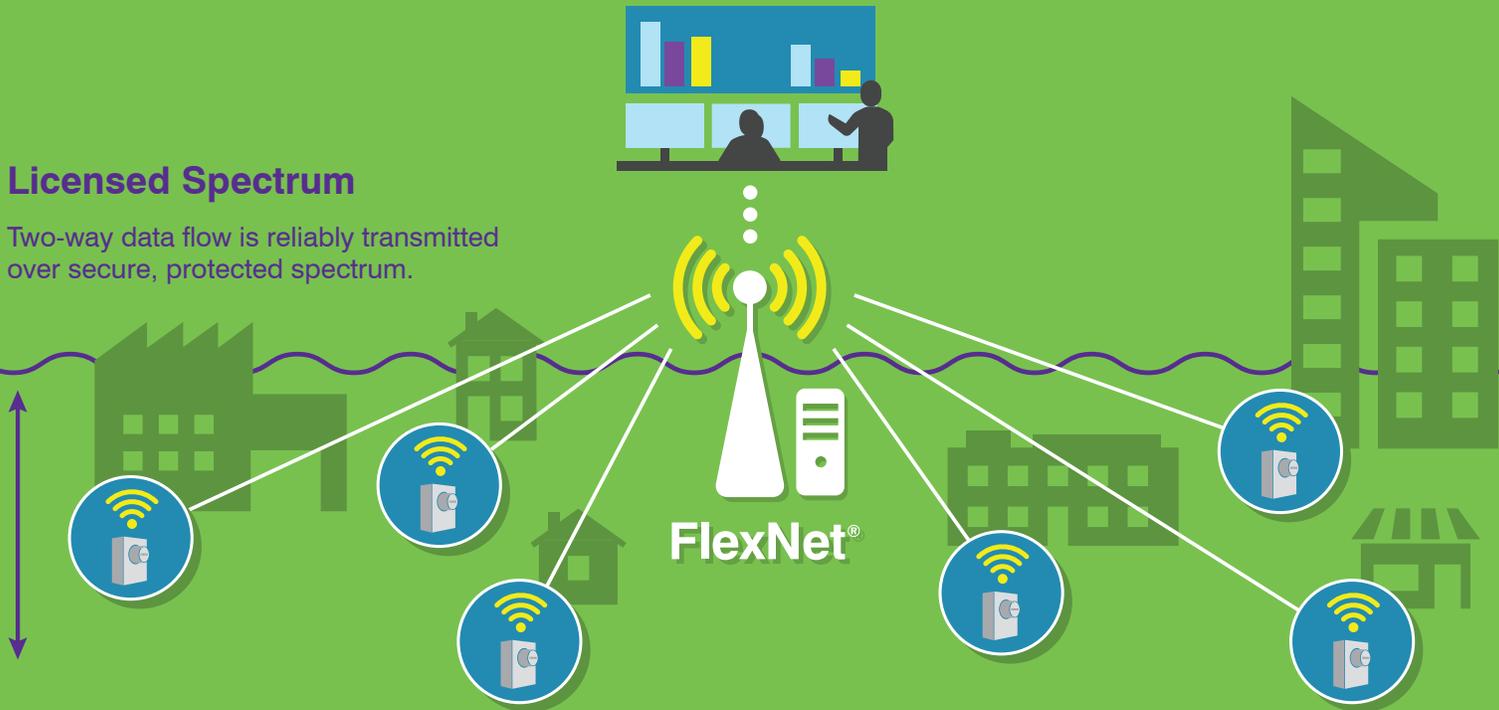

IEI Technology Partner Snapshot

Sensus helps electric companies and both their residential and large customers, including commercial and industrial, (such as hospitals, universities and manufacturers) and municipalities with innovation in sensing and communications technologies, data analytics and services.

Licensed Spectrum

Two-way data flow is reliably transmitted over secure, protected spectrum.

How Sensus is Partnering with Electric Companies:

PECO, an Exelon Company

PECO has deployed over 2.1 million Sensus electric and gas smart meters—gaining advanced control and visibility into their grid and gas operations. In the aftermath of Superstorm Sandy, PECO leveraged the FlexNet communications network to eliminate thousands of truck rolls, restore power three days faster than expected, and **save \$15 million.**

Southern Company

Southern Company has deployed 4.4 million Sensus smart meters – with a **read success rate of 99.99 percent** – to its customers. With FlexNet, Southern Co. uses this technology for demand response, pre-payment remote service, and smart street lighting.

NV Energy

NV Energy is using FlexNet to monitor and control more than 1.5 million AMI-enabled electric and gas meters, and to enable distribution grid automation, demand response, and remote disconnect across their entire service territory. Since deployment, NV Energy avoided 3.5 million truck rolls and has **reduced operating costs by \$20 million annually.**
